

**Prof. Jean-François Rouet, Université de Poitiers, France**

My research work deals with the abilities and cognitive processes involved in the comprehension and use of texts and complex documents. I am especially interested in the processes of information search, hypertext navigation, as well as the evaluation and integration of multiple information sources. Part of my research deals with children and teenagers' acquisition of these abilities, whereas another part investigate young adults' reading behavior in various task contexts.

Among recent publications, I have co-authored the book: "Literacy beyond text comprehension: a theory of purposeful reading" (Pergamon, 2018) with Anne Britt and Amanda Durik.

At the conference I'll focus my talk on the issue of sources and evaluation in reading.
